KENYA LEARNER DRIVER HANDBOOK

MULTIPLE CHOICE QUESTIONS
CHAPTERS 1–15

•30 Questions per Chapter • Answer Key

SAFESTART DRIVING SCHOOL

© Safe Start Driving School

Instructions

- Answer all questions by selecting the best option: A, B, C or D.
- Each question carries one mark. Total: 30 qs each chapter
- The marking scheme is provided after the questions, organized by chapter.

CHAPTER 1 INTRODUCTION TO DRIVING

1. What is the main purpose of driver training according to the handbook?

A. To teach drivers how to repair every vehicle fault
B. To equip drivers with knowledge to handle the vehicle and act appropriately on the road
C. To help drivers avoid all traffic signs
D. To increase vehicle speed

2. Motor vehicles are important in day-to-day life mainly because they provide a means of transporting:

A. Only drivers
B. People and goods from one location to another
C. Only emergency workers
D. Only passengers within towns

3. According to the handbook, most traffic accidents are caused by:

A. Road signs
B. Human error
C. Vehicle colour
D. Traffic lights

4. A learner driver is better prepared for traffic situations when the learner has:

A. Adequate preparation and training
B. No practical experience
C. A preference for high speeds
D. Avoided learning road rules

5. Which outcome is expected from effective driver training?

A. Safe and efficient transport of goods and passengers
B. Elimination of all traffic congestion
C. Permission to ignore road markings
D. Automatic exemption from traffic laws

6. A driver who has learned how to handle a vehicle but does not know how to act appropriately on the road has missed an important part of:

A. Driver training
B. Vehicle painting
C. Fuel selection
D. Parking construction

7. Why does the handbook emphasize preparation for traffic situations?

A. Because adequate preparation can help prevent human-error accidents
B. Because prepared drivers never need mirrors
C. Because it allows drivers to exceed speed limits
D. Because preparation replaces practical training

8. Which statement best describes the role of a driver on the road?

A. The driver only controls the accelerator
B. The driver should understand the vehicle and behave appropriately in the road environment
C. The driver is responsible only for passengers
D. The driver may ignore other road users

9. A new learner wants to become a safer driver. Which approach is most consistent with the handbook?

A. Acquire knowledge, skills and appropriate road behaviour

© Safe Start Driving School

SAFESTART DRIVING SCHOOL

B. Drive immediately without instruction
C. Concentrate only on vehicle speed
D. Avoid practising manoeuvres

10. Driver training is intended to provide the necessary skills for:

A. Safe and efficient transport services
B. Changing traffic laws
C. Designing roads
D. Manufacturing vehicles

11. If human error is a major cause of crashes, which response is most consistent with the handbook?

A. Adequate preparation and training
B. Ignoring mistakes
C. Driving faster to leave danger
D. Using the horn continuously

12. A learner is asked why road knowledge matters. The best answer is that it helps the driver:

A. Handle the vehicle and act appropriately when using the road
B. Avoid all mechanical maintenance
C. Travel without observing other users
D. Replace practical driving with theory

13. Which activity best supports the goal of safe and efficient transport?

A. Combining vehicle-handling knowledge with appropriate road behaviour
B. Ignoring Road conditions
C. Carrying as many passengers as possible
D. Driving without preparation

14. The handbook presents driver training as a way of preparing a driver to:

A. Respond appropriately to traffic situations
B. Avoid all journeys
C. Operate only parked vehicles
D. Use only one road

15. A learner says, 'Accidents cannot be prevented because mistakes are inevitable.' Which handbook principle challenges this view?

A. Adequate preparation can help prevent human-error accidents
B. Traffic accidents are always unavoidable
C. Only road engineers prevent accidents
D. Drivers have no responsibility for safety

16. Which pair is most closely associated with the stated goals of driver training?

A. Vehicle handling and appropriate road behaviour
B. Vehicle colour and engine size
C. Fuel price and road construction
D. Passenger age and vehicle ownership

17. A driver who understands the road environment is better positioned to:

A. Use the road safely
B. Ignore traffic regulations
C. Drive without observation
D. Avoid all responsibility

18. What does the handbook identify as an important part of becoming a safe road user?

© Safe Start Driving School

SAFE START DRIVING SCHOOL

A. Training and practice
B. Driving alone without supervision
C. Avoiding all traffic
D. Using the highest gear at all times

19. Which situation best illustrates the need for driver preparation?

A. A driver anticipates a traffic situation because of prior training
B. A driver ignores a changing traffic situation
C. A driver refuses to practise
D. A driver drives without knowing the controls

20. Why should learners develop practical driving skills as well as knowledge?

A. Because safe and efficient transport requires both understanding and vehicle-handling ability
B. Because knowledge is never useful
C. Because practical skills allow road rules to be ignored
D. Because every vehicle has identical controls

21. A learner has good vehicle-control skills but frequently behaves unpredictably around other road users. What should be improved?

A. Appropriate road behaviour
B. Vehicle colour
C. Fuel tank size
D. Seat upholstery

22. Which statement is supported by the handbook?

A. Driver training can prepare a person to respond better to traffic situations
B. Driver training makes traffic rules unnecessary
C. Human error has no role in accidents
D. Vehicle handling is unrelated to safety

23. A learner asks what should be achieved before providing transport services. The handbook emphasizes:

A. Necessary knowledge and skills for safe and efficient transport
B. Maximum speed
C. Maximum passenger loading
D. Avoiding all traffic signs

24. The road environment is important because a driver must:

A. Act appropriately while using the road
B. Concentrate only on the dashboard
C. Ignore pedestrians
D. Use the horn continuously

25. What is the most suitable attitude toward driver preparation?

A. Take training and practice seriously before independent road use
B. Treat training as optional
C. Learn only vehicle controls
D. Practise only emergency manoeuvres

26. Which factor is specifically identified as preventable through adequate preparation?

A. Human-error-related crashes
B. All mechanical failures
C. All weather events
D. All road construction delays

© Safe Start Driving School

SAFE START DRIVING SCHOOL

27. A driver is transporting goods for work. Which training outcome is particularly relevant?

A. Safe and efficient transport of goods
B. Permission to overload the vehicle
C. Exemption from traffic rules
D. Removal of the need for vehicle checks

28. A passenger asks why the driver needs training if the vehicle is modern. The best answer is:

A. The driver still needs knowledge of vehicle handling and appropriate road behaviour
B. Modern vehicles eliminate human error
C. Modern vehicles make road rules unnecessary
D. Training is only for old vehicles

29. Which of the following is NOT a stated purpose of driver training?

A. Teaching drivers to ignore road conditions
B. Equipping drivers with appropriate knowledge
C. Developing vehicle-handling skills
D. Preparing drivers for safe transport

30. A learner wants to reduce the chance of becoming involved in a crash caused by poor decisions. What principle from Unit 1 is most relevant?

A. Adequate preparation for traffic situations
B. Driving at maximum speed
C. Avoiding all practice
D. Ignoring road users

Chapter 1 total: 30 marks.

SAFESTART DRIVING SCHOOL

CHAPTER 2 FUNDAMENTALS OF DRIVING

1. Which two documents are identified as key sources of road rules and regulations?

A. The Traffic Act and Highway Code
B. Vehicle logbook and fuel receipt
C. Road map and insurance card
D. Driving school timetable and passport

2. What does the Traffic Act set out?

A. Laws governing road use and expected conduct of road users
B. Only road construction standards
C. Only vehicle colours
D. Only fuel prices

3. What is the main purpose of the Highway Code?

A. To promote safety, responsible behaviour and courtesy
B. To provide vehicle repair instructions only
C. To replace all traffic laws
D. To regulate fuel consumption

4. The Highway Code provides guidance for which group?

A. Pedestrians, cyclists, motorcyclists and animal users among other road users
B. Only professional drivers
C. Only police officers
D. Only passengers

5. A driver wants to use the horn while stationary merely to express anger. According to the handbook, this is:

A. Not permitted
B. Required
C. Recommended
D. Mandatory at every junction

6. When may a car horn be used according to the handbook?

A. When the vehicle is moving and the horn is needed to warn other road users of the driver's presence
B. Whenever the driver is angry
C. Whenever the vehicle is stationary
D. Only at hospitals

7. Where is hooting specifically prohibited?

A. At places with a 'No Hooting' sign and designated areas such as hospitals and schools
B. Only on highways
C. Only at roundabouts
D. Only in parking zones

8. An ambulance approaches with a siren or flashing lights. What should other road users do?

A. Give it right-of-way
B. Race ahead of it
C. Block its path
D. Use the horn aggressively

9. Which of the following is also entitled to right-of-way under the handbook?

A. A police car
B. Any overloaded vehicle

© Safe Start Driving School

SAFESTART DRIVING SCHOOL

C. A parked vehicle
D. A vehicle without lights

10. A traffic marshal instructs you to give way. What should you do?

A. Comply with the instruction
B. Ignore it if the road is clear
C. Hoot until the marshal moves
D. Accelerate through the junction

11. Driving or riding in an area designated for pedestrians and cyclists is:

A. Not allowed
B. Always recommended
C. Required during traffic jams
D. Allowed only at night

12. What are the two types of traffic signals identified in the handbook?

A. Hand signals and light signals
B. Road signs and road markings
C. Horn signals and engine sounds
D. Parking signs and fuel gauges

13. A triangular traffic sign generally belongs to which broad category?

A. Warning
B. Giving an order
C. Informing
D. Parking

14. A circular traffic sign generally indicates:

A. Giving an order
B. Warning only
C. Information only
D. A pedestrian crossing only

15. A rectangular traffic sign generally provides:

A. Information
B. A mandatory stop in every case
C. A warning only
D. A prohibition against all vehicles

16. A driver sees a 'No Hooting' sign. Which action follows the handbook?

A. Do not use the horn
B. Hoot briefly
C. Hoot continuously
D. Use the horn only when stationary

17. A driver is angry because another road user made a mistake. How should the horn be used?

A. Not aggressively, even if the other road user is at fault
B. Aggressively to punish the road user
C. Continuously until the road user moves
D. Only while stationary

18. Why should road users learn the Traffic Act and Highway Code?

A. To understand essential rules for safe driving and general behaviour in traffic

© Safe Start Driving School

SAFE START DRIVING SCHOOL

B. To avoid all road signs
C. To replace vehicle inspection
D. To obtain fuel discounts

19. A fire engine approaches with flashing lights. Which principle applies?

A. Give right-of-way
B. Maintain speed and block the lane
C. Park in front of it
D. Overtake it immediately

20. Which behaviour best reflects the Highway Code's purpose?

A. Safety, responsibility and courtesy
B. Speed, competition and aggression
C. Silence, parking and overtaking
D. Fuel saving at all costs

21. A driver is stationary on the road and wants to attract attention with the horn. According to Unit 2, the driver should:

A. Not use the horn while stationary
B. Hoot continuously
C. Hoot twice
D. Use the horn only at a hospital

22. A road user is told by a police officer to give way. The instruction is:

A. A situation in which right-of-way should be given
B. Optional if the road is empty
C. Relevant only to pedestrians
D. Relevant only to cyclists

23. Which road user is specifically protected by the rule against entering pedestrian-designated areas?

A. Pedestrians
B. Only bus drivers
C. Only mechanics
D. Only traffic police

24. Why are traffic signs and signals important?

A. They communicate information, warnings and instructions on the road
B. They decorate roads
C. They replace driver observation
D. They indicate vehicle ownership

25. A driver sees a warning sign shaped like a triangle. What should the driver recognize it as?

A. A warning sign
B. An information sign
C. A mandatory circular order
D. A parking sign

26. A driver sees a circular sign and wonders what broad class it represents. The handbook says circles generally:

A. Give an order
B. Provide information only
C. Warn of every hazard
D. Mark a central reserve

© Safe Start Driving School

SAFE START DRIVING SCHOOL

27. Which action would violate the handbook's horn guidance?

A. Hooting aggressively at a driver who made a mistake
B. Warning another road user while moving
C. Respecting a No Hooting sign
D. Avoiding the horn at a school

28. A learner is studying road rules before driving independently. Which source combination should receive attention?

A. Traffic Act and Highway Code
B. Fuel manual and tyre catalogue
C. Vehicle brochure and newspaper
D. Map and weather report only

29. Which statement best summarizes Unit 2?

A. Road rules and regulations help maintain order and safety on the road
B. Road rules are optional when traffic is light
C. Only police need to know road rules
D. Road users can choose which laws to follow

30. Which action is consistent with the responsibility of a road user under Unit 2?

A. Learning the essential rules for safe driving and responsible behaviour in traffic
B. Following only rules that are convenient
C. Ignoring courtesy when traffic is heavy
D. Using the horn whenever another driver is slow

Chapter 2 total: 30 marks.

CHAPTER 3 INTRODUCTION TO DRIVING

1. What does the model town board represent?

A. A simplified road network used to explain road types and features
B. A vehicle repair diagram
C. A fuel consumption chart
D. A traffic police timetable

2. Which feature is included on the model town board?

A. A roundabout
B. A petrol station only
C. A railway timetable
D. A vehicle workshop

3. On a one-way traffic road, traffic vehicles move:

A. In one direction
B. In opposite directions
C. Only in reverse
D. Only during daylight

4. What does a white continuous line dividing lanes on a one-way road mean?

A. No changing lanes or overtaking
B. Overtake whenever desired
C. Parking is allowed
D. U-turns are compulsory

5. What does a white broken line on a one-way road allow?

A. Overtaking or lane changing when the road is clear and safe
B. Parking at any time
C. Stopping in the lane
D. Driving against traffic

6. What is the purpose of the yellow kerb described in the handbook?

A. It protects the field and means no overlapping, parking, waiting or stopping
B. It marks a pedestrian crossing
C. It permits parking for small cars
D. It marks a passing lane

7. A driver is on a two-way road with a continuous yellow centre line. What should the driver do?

A. Stay on the driver's side and do not overtake
B. Overtake whenever desired
C. Drive in the centre
D. Use the opposite lane continuously

8. A broken yellow centre line on a two-way road means a driver may overtake when:

A. The road is clear and safe
B. The driver is in a hurry
C. The vehicle ahead is slow regardless of conditions
D. A horn is sounded

9. On a single carriageway, drivers should generally:

A. Keep left unless overtaking
B. Keep right at all times

© Safe Start Driving School

SAFESTART DRIVING SCHOOL

C. Drive on the centre line
D. Use the shoulder

10. At a pedestrian crossing, a driver should:

A. Slow down and stop to allow pedestrians to cross
B. Accelerate through the crossing
C. Hoot continuously
D. Change lanes without checking

11. What is the main function of a roundabout?

A. To facilitate movement in different directions without obstruction or collision
B. To provide a parking area
C. To allow vehicles to stop anywhere
D. To replace all road signs

12. Which action is prohibited at a roundabout?

A. Changing lanes
B. Following the correct lane
C. Proceeding around the roundabout
D. Using the designated approach lane

13. Which other action is prohibited at a roundabout?

A. Overtaking
B. Following the lane
C. Exiting correctly
D. Moving clockwise

14. How are lanes on the roundabout numbered?

A. From the outermost lane to the innermost lane
B. From the centre outward
C. Randomly
D. From right to left only

15. What is the traffic island?

A. The green central part used to control vehicle movement
B. The parking lane outside the roundabout
C. The pedestrian crossing
D. The outermost lane

16. On a four-lane road, which lane allows a full 360-degree movement around the roundabout?

A. Lane 4, the innermost lane
B. Lane 1
C. Lane 2
D. Lane 3

17. On a three-lane road, which lane is identified as allowing a 270-degree movement?

A. Lane 3, the innermost lane
B. Lane 1
C. Lane 2
D. The shoulder

18. A driver approaches a roundabout in the wrong lane. This is identified as:

A. A common mistake

SAFE START DRIVING SCHOOL

© Safe Start Driving School

B. A required manoeuvre
C. A form of parking
D. A safe shortcut

19. Which is another common roundabout mistake?

A. Changing lanes on the roundabout
B. Keeping left
C. Following the correct exit
D. Observing traffic lights correctly

20. According to the handbook, traffic on the roundabout should move:

A. Clockwise while keeping left
B. Anti-clockwise while keeping right
C. Straight through the island
D. Randomly

21. Angle parking is intended strictly for:

A. Small cars such as saloons
B. Tractors and trailers
C. All heavy vehicles
D. Buses only

22. In angle parking, the vehicle should be parked from:

A. The farthest end
B. The nearest end
C. The central reserve
D. The pedestrian crossing

23. In angle parking, the vehicle enters the parking space using:

A. Forward gear/direct driving
B. Reverse only
C. Neutral only
D. The handbrake only

24. In angle parking, the vehicle exits by:

A. Reverse
B. Forward gear only
C. Driving through the central reserve
D. Changing lanes on the roundabout

25. Flush parking is described as:

A. Parallel/uncontrolled parking found on the left side in the direction of traffic
B. Controlled angle parking for saloons only
C. Parking in the central reserve
D. Parking on a pedestrian crossing

26. Which vehicles are excluded from flush parking under the handbook?

A. Tractors and trailers
B. Small cars
C. Light vehicles
D. Passenger cars

27. At a stop sign, a driver must:

SAFE START DRIVING SCHOOL

© Safe Start Driving School

A. Stop and look right, left and right again, then proceed if clear
B. Slow down only without stopping
C. Hoot and proceed
D. Look left only

28. What is the shape of the give-way sign described in the handbook?

A. A red triangle with the apex facing downward
B. A red octagon
C. A blue rectangle
D. A green circle

29. At a give-way sign, a driver should:

A. Slow down or stop if necessary and proceed only when safe
B. Always stop for exactly one minute
C. Accelerate without checking
D. Park before proceeding

30. What is the recommended route principle for the model town board?

A. Use the shortest or longest correct route without using parking, using parking only as a last option
B. Always use the parking zone
C. Always take the longest route through parking
D. Reverse through the model town

Chapter 3 total: 30 marks.

SAFESTART DRIVING SCHOOL

© Safe Start Driving School

CHAPTER 4 HUMA FACTORS IN DRIVING

1. What does observation mean in safe driving?

A. Using sight and hearing to get a clear perception of what is around
B. Looking only at the road centre
C. Watching the dashboard only
D. Listening only to the engine

2. Why should a driver keep the eyes moving?

A. To avoid focusing on only one angle and to maintain a wider view
B. To make the journey faster
C. To avoid using mirrors
D. To reduce fuel consumption

3. Which road users deserve special attention as vulnerable users?

A. Children, elderly people and persons with disabilities
B. Only professional drivers
C. Only cyclists
D. Only passengers

4. When passing parked cars, a driver should watch for:

A. Opening doors and passengers exiting
B. Only vehicle colours
C. Fuel stations
D. Roadside advertisements

5. If a driver needs spectacles to meet the required eyesight standard, the driver should:

A. Wear them before starting the journey
B. Keep them in the glove box
C. Use them only at night
D. Remove them while driving

6. Why should tinted sunglasses or helmet visors be avoided at night?

A. They can reduce visibility in poor light
B. They improve night vision too much
C. They increase engine power
D. They reduce tyre wear

7. What is fatigue?

A. Extreme tiredness resulting from mental or physical exertion
B. A type of traffic sign
C. A vehicle defect
D. A form of parking

8. Which factor can cause driver fatigue?

A. Insufficient sleep or rest
B. A clean windscreen
C. Correct tyre pressure
D. Using mirrors

9. What should a tired driver do?

A. Stop at a safe place and rest
B. Increase speed

© Safe Start Driving School

SAFESTART DRIVING SCHOOL

C. Drink alcohol
D. Continue until reaching the destination

10. A driver has been driving a long distance without a break. Which handbook advice applies?

A. Take regular breaks
B. Avoid all rest
C. Drive faster
D. Turn off the mirrors

11. Why is night driving identified as a fatigue risk?

A. It is a time when the driver is likely to feel sleepy
B. It always has heavy traffic
C. It increases tyre pressure
D. It removes all distractions

12. What is a driving distraction?

A. Anything that reduces the ability to respond as quickly as required during an emergency
B. Only a broken headlight
C. A road sign
D. A seat belt

13. Which phone use is identified as distracting?

A. Talking or texting on a hand-held phone
B. Keeping the phone out of reach
C. Switching the phone off
D. Setting the phone before the journey

14. When should a GPS unit ideally be set?

A. Before starting the journey
B. While negotiating a junction
C. While overtaking
D. During an emergency stop

15. Why is carbon monoxide dangerous?

A. It is an odourless gas in exhaust fumes that can be lethal
B. It improves engine performance
C. It is a harmless fuel additive
D. It prevents fatigue

16. A driver feels drowsy and suspects exhaust fumes may be entering the vehicle. What should the driver do?

A. Stop and get out for fresh air
B. Continue driving faster
C. Close all windows and continue
D. Turn up the radio

17. Which statement about alcohol is supported by the handbook?

A. It slows brain functions and affects decisions and reactions
B. It improves concentration
C. It improves balance
D. It makes distance judgment more accurate

18. Alcohol can cause a driver to take greater risks because it can create:

A. False confidence

© Safe Start Driving School

SAFE START DRIVING SCHOOL

B. Better concentration
C. Better balance
D. Greater visibility

19. A driver is taking medicine that causes drowsiness. The handbook advises the driver to:

A. Not use the road while affected by such medicine
B. Drive only at high speed
C. Take extra medicine before driving
D. Ignore the effect

20. All passengers should wear safety belts:

A. At all times, regardless of how short the journey is
B. Only on highways
C. Only at night
D. Only when the driver requests

21. A child restraint should be used because it:

A. Helps the seat belt fit properly and improves safety
B. Allows the child to sit on the dashboard
C. Replaces the driver's seat belt
D. Makes speeding safer

22. What should a driver do with litter?

A. Dispose of it in a dustbin before or at the end of the journey
B. Throw it onto the road
C. Leave it under the seat
D. Throw it through the window

23. If another road user provokes a driver, the driver should:

A. Remain courteous and not retaliate
B. Chase the other driver
C. Hoot aggressively
D. Block the road

24. Which action helps prevent vehicle theft when leaving the vehicle?

A. Switch off the ignition, remove the keys and secure the vehicle
B. Leave the keys inside
C. Leave the windows open
D. Leave the boot unlocked

25. Why should cargo be placed low and close to the vehicle centre?

A. To help maintain vehicle stability
B. To make the vehicle look full
C. To increase wind resistance
D. To reduce visibility

26. A driver wants to put luggage on the roof. The handbook says this should be done:

A. Only if there is a designated luggage compartment for that purpose
B. Whenever the roof is empty
C. Only during rain
D. Only when driving slowly

27. What can happen if tyre pressure is too high or too low when carrying a load?

SAFE START DRIVING SCHOOL

© Safe Start Driving School

A. The vehicle may become unstable
B. The engine becomes more powerful
C. The horn stops working
D. The mirrors become convex

28. Where should reflector triangles be placed around a disabled vehicle according to the safety-equipment section?

A. 60 metres ahead and 60 metres behind
B. 5 metres ahead only
C. 10 metres behind only
D. At the driver's seat

29. What is the purpose of a first-aid kit?

A. To provide materials for basic treatment in an emergency
B. To repair the engine
C. To replace the spare tyre
D. To measure speed

30. A vehicle breaks down and needs minimal repair. Which equipment is specifically mentioned for this purpose?

A. A tool box containing items such as a jack and spanner
B. A GPS only
C. A horn
D. A passenger seat

Chapter 4 total: 30 marks.

SAFESTART DRIVING SCHOOL

© Safe Start Driving School

CHAPTER 5 VEHICLE COONTRUCTIONS AND CONTROL

1. What is the main purpose of the dashboard?

A. It contains instruments and controls used to run the vehicle
B. It is used only for storage
C. It is the vehicle's exhaust system
D. It is the parking brake

2. What is the function of the steering wheel?

A. To change direction or maintain the direction of travel
B. To increase engine temperature
C. To measure speed
D. To operate the wipers

3. What does the direction indicator communicate?

A. An intention to turn left or right
B. The engine temperature
C. The tyre pressure
D. The vehicle weight

4. What is the gear lever used for?

A. Changing gears
B. Starting the wipers
C. Measuring speed
D. Operating the horn

5. What is the hand brake mainly used for?

A. Keeping the vehicle stationary, especially on inclines
B. Increasing speed
C. Changing gears
D. Cleaning the windscreen

6. Which control is used to slow the vehicle or bring it to a stop?

A. Brake pedal
B. Accelerator
C. Gear lever
D. Wiper switch

7. Which pedal increases speed?

A. Accelerator
B. Clutch
C. Brake
D. Hand brake

8. In a manual vehicle, the clutch pedal is used to:

A. Change gears
B. Increase engine temperature
C. Operate the indicators
D. Adjust mirrors

9. What is the purpose of the rear-view mirror?

A. To see vehicles and hazards behind the vehicle
B. To measure speed

© Safe Start Driving School

SAFESTART DRIVING SCHOOL

C. To cool the engine
D. To indicate turns

10. What is the purpose of side mirrors?

A. To see vehicles behind and to the side
B. To operate the brakes
C. To change gears
D. To start the engine

11. A driver is caught in rain and needs a clearer windscreen. Which control should be used?

A. Windscreen wiper switch
B. Speedometer
C. Gear lever
D. Hand brake

12. What does the speedometer show?

A. The speed at which the vehicle is travelling
B. The engine temperature
C. The tyre pressure
D. The fuel type

13. What does the temperature gauge help the driver monitor?

A. Whether the engine is overheating
B. Whether the vehicle is parked
C. Whether the horn works
D. Whether the indicator is flashing

14. Which of the following is listed as a component of a light vehicle?

A. Radiator
B. Traffic island
C. Give-way sign
D. Pedestrian crossing

15. Which component carries the vehicle structure and is listed among light-vehicle parts?

A. Chassis
B. Horn button
C. Traffic sign
D. Seat belt

16. Which part is associated with carrying exhaust gases away from the engine?

A. Exhaust pipe
B. Rear-view mirror
C. Gear lever
D. Side mirror

17. Which accessory is listed for a light vehicle?

A. Air-conditioning
B. Traffic marshal
C. Pedestrian island
D. Road marking

18. What does ABS stand for?

A. Antilock Braking System

SAFESTART DRIVING SCHOOL

© Safe Start Driving School

B. Automatic Balance Steering
C. Advanced Battery System
D. Anti-Burn Safety

19. What does SRS stand for in the handbook?

A. Secondary Restrain System
B. Speed Regulation Signal
C. Steering Response Switch
D. Safety Road Sensor

20. Which system is responsible for transmitting engine power through the vehicle?

A. Transmission system
B. Lighting system
C. Wiper system
D. Mirror system

21. Which system is directly associated with changing the direction of the vehicle?

A. Steering system
B. Exhaust system
C. Lighting system
D. Cooling system

22. Which system is associated with stopping or slowing the vehicle?

A. Braking system
B. Air-conditioning system
C. Exhaust system
D. Body system

23. Which pair is listed under vehicle systems?

A. Suspension system and rim/tyres
B. Traffic lights and stop signs
C. Horn and road signs
D. Pedestrian crossing and kerb

24. A driver notices that the engine temperature is rising. Which dashboard instrument should be checked?

A. Temperature gauge
B. Speedometer
C. Direction indicator
D. Wiper switch

25. A driver wants to signal a right turn. Which control is appropriate?

A. Direction indicator
B. Hand brake
C. Temperature gauge
D. Clutch pedal

26. A driver wants to keep the car stationary on an incline. Which control is designed for this purpose?

A. Hand brake
B. Accelerator
C. Wiper switch
D. Speedometer

27. A manual driver needs to change gear. Which combination is most relevant?

© Safe Start Driving School

SAFE START DRIVING SCHOOL

A. Clutch pedal and gear lever
B. Wiper switch and speedometer
C. Hand brake and horn
D. Temperature gauge and mirror

28. Which statement about the steering wheel is correct according to the handbook?

A. Both hands should normally be on it except when changing gears or indicating
B. It should never be touched while driving
C. It is used to measure engine temperature
D. It is only used when parking

29. Why should drivers know the location and function of dashboard controls?

A. So they can operate and maintain the vehicle appropriately
B. So they can ignore warning instruments
C. So they can increase the vehicle's maximum speed
D. So they can avoid using mirrors

30. A learner confuses the brake pedal with the accelerator. Which correction follows the handbook?

A. The brake pedal slows or stops the vehicle, while the accelerator increases speed
B. Both pedals increase speed
C. Both pedals stop the vehicle
D. The accelerator changes gears

Chapter 5 total: 30 marks.

CHAPTER 6 VEHICLE INSPECTION

1. What is self-inspection?

A. Checking vehicle aspects to ensure the vehicle is safe to use
B. Checking only the vehicle colour
C. Checking only the fuel level
D. Checking only the seats

2. When should self-inspection be carried out?

A. Before and also at the end of a journey
B. Only after an accident
C. Only once a year
D. Only when buying a vehicle

3. Self-inspection is divided into which two parts?

A. Exterior and interior inspection
B. Engine and road inspection
C. Passenger and cargo inspection
D. Day and night inspection

4. Which item is part of exterior inspection?

A. Tyres
B. Oil level only
C. Battery only
D. Gear selection only

5. Why should tyres be visually inspected before and after every journey?

A. To identify conditions that may affect safe braking and cornering
B. To improve radio reception
C. To increase engine power
D. To change vehicle colour

6. Small stones wedged in a tyre tread:

A. Can cause problems later
B. Always improve grip
C. Increase fuel capacity
D. Make the tyre new

7. What should a driver check regarding tyre pressure?

A. That it is appropriate and that both under- and over-inflation are recognized as harmful
B. That it is always maximum
C. That it is always minimum
D. That pressure is irrelevant

8. A driver finds an old, aging tyre with poor tread. What should be done?

A. Replace the aging tyre
B. Ignore it until it bursts
C. Increase vehicle speed
D. Remove all other tyres

9. Which lights should be checked during exterior inspection?

A. Headlights, turn signals and hazard lights
B. Only interior lights

© Safe Start Driving School

SAFESTART DRIVING SCHOOL

C. Only dashboard lights
D. Only parking-lot lights

10. Why may a driver need assistance when checking reverse lights?

A. They can only be checked while the vehicle is reversing
B. They work only when parked
C. They are located in the engine
D. They cannot be seen at night

11. Before driving, mirrors should be:

A. Present, properly adjusted and unobstructed
B. Folded inward
C. Covered
D. Removed

12. What should be checked about windscreen wipers?

A. They should work at all settings and there should be wiper fluid
B. They should never be used
C. They should be removed in rain
D. They should operate only at maximum speed

13. Why should windows be checked?

A. To ensure they open and close without difficulty and the roll-up mechanism works
B. To make the vehicle heavier
C. To increase engine speed
D. To reduce mirror visibility

14. Why should the windscreen, windows and mirrors be clean?

A. For ease of navigation and better visibility
B. To reduce fuel consumption
C. To increase tyre pressure
D. To improve the horn

15. Why should the vehicle interior be free of clutter?

A. To minimize distraction and keep passengers comfortable
B. To increase engine power
C. To reduce tyre wear
D. To change gear automatically

16. What should be checked about safety belts?

A. That clasps work correctly and belts are clean and functional
B. That they are decorative
C. That they are removed before driving
D. That only the driver's belt works

17. Child safety seats or booster seats should be:

A. In good condition and properly secured when in use
B. Placed loosely on the seat
C. Used only when the car is stationary
D. Stored on the roof

18. Which is part of the emergency equipment check?

A. Reflector triangle, fire extinguisher, first-aid kit, tools, spare tyre and survival gear

SAFE START DRIVING SCHOOL

© Safe Start Driving School

B. Only a radio
C. Only a phone charger
D. Only a map

19. What paperwork should the driver verify?

A. Appropriate licence, roadworthiness, correct registration and vehicle insurance
B. Only a fuel receipt
C. Only a driving-school card
D. Only a map

20. Why is interior inspection important?

A. It helps ensure the vehicle is mechanically sound
B. It replaces all exterior checks
C. It eliminates the need for maintenance
D. It is only for comfort

21. Which interior item should be inspected for proper operation?

A. Brakes
B. Paintwork only
C. Number plate colour
D. Roof rack

22. How is the steering wheel's full range described in the handbook?

A. It should be able to turn through 360 degrees and effectively turn the front wheels
B. It should turn only 90 degrees
C. It should never move
D. It should turn only when parked

23. What should be checked about indicators during interior inspection?

A. That all indicators are operational
B. That they are permanently on
C. That they are removed
D. That they are covered

24. What should be checked about the gears?

A. That the vehicle can shift into any gear
B. That only reverse works
C. That neutral is never used
D. That gears are changed without the lever

25. A driver discovers a spare tyre is badly deflated before a journey. What is the most appropriate response?

A. Ensure the spare tyre is in good condition before relying on it
B. Ignore it because it is only a spare
C. Remove it from the vehicle
D. Use it as a passenger seat

26. A driver's mirrors are dirty and poorly adjusted. What should happen before departure?

A. Clean and properly adjust them
B. Drive first and adjust them later
C. Cover them
D. Remove them

27. A vehicle's hazard lights do not work during inspection. What does this indicate?

SAFE START DRIVING SCHOOL

© Safe Start Driving School

A. A defect that should be addressed before relying on the vehicle
B. A normal condition
C. A reason to drive faster
D. A reason to remove the headlights

28. A driver checks the vehicle at the end of a journey and finds a problem. Why is this useful?

A. It allows repairs to be planned before the next journey
B. It eliminates the need for future checks
C. It makes the vehicle automatically roadworthy
D. It permits overloading

29. Which inspection sequence best reflects the handbook?

A. Check relevant exterior and interior components before driving
B. Check only the fuel gauge
C. Check only the radio
D. Check only the seats

30. A driver wants to know whether a vehicle is ready for a journey. Which approach is safest according to Unit 6?

A. Carry out self-inspection and address defects before driving
B. Assume the vehicle is safe because it drove yesterday
C. Skip the inspection on short journeys
D. Inspect only after reaching the destination

Chapter 6 total: 30 marks.

SAFESTART DRIVING SCHOOL

© Safe Start Driving School

CHAPTER 7 OBSERVATION ON THE ROAD

1. What is observation in the context of safe driving?

A. Using sight and hearing to perceive what is around the vehicle
B. Looking only through the windscreen
C. Listening only to the radio
D. Checking only the speedometer

2. Driver visibility is best described as:

A. The maximum distance at which a driver can clearly identify objects around the car
B. The distance a car can travel on one litre
C. The width of the driver's seat
D. The length of the bonnet

3. Driver visibility varies with:

A. Vehicle type, traffic conditions and the driver's own ability to see
B. Only vehicle colour
C. Only fuel type
D. Only road ownership

4. Which mirror sequence is recommended when checking before a manoeuvre?

A. Centre interior mirror followed by the door mirror in the intended direction
B. Door mirror only
C. Interior mirror only
D. No mirrors

5. What should a driver look for in mirrors?

A. Potential hazards such as close-following vehicles, fast-approaching vehicles, cyclists and motorcyclists
B. Only parked cars
C. Only traffic signs
D. Only pedestrians behind buildings

6. A vehicle is following very closely. What may the driver need to do when preparing to stop?

A. Slow down earlier than usual to give the following driver more reaction time
B. Brake suddenly
C. Accelerate sharply
D. Ignore the vehicle

7. A vehicle is approaching quickly from behind. The handbook suggests that, if possible, the driver may:

A. Slow down slightly later than usual to allow the approaching driver greater stopping distance
B. Stop immediately in the lane
C. Reverse
D. Turn off the mirrors

8. Why is the blind spot important?

A. It is an area the driver cannot directly observe while driving
B. It is the clearest part of the road
C. It is where the speedometer is located
D. It is the centre of the dashboard

9. When should a blind-spot check be made?

A. Before changing direction when a potential hazard may be obscured
B. Only after parking

© Safe Start Driving School

SAFESTART DRIVING SCHOOL

C. Only when the road is empty
D. Only at traffic lights

10. A driver is about to change lanes on a dual carriageway. What additional check is important?

A. The blind spot
B. The fuel cap
C. The boot
D. The glove compartment

11. Why should cyclists and motorcyclists receive special attention in mirror checks?

A. They may move forward past slowing traffic and can be hidden in blind spots
B. They always drive on sidewalks
C. They cannot use roads
D. They never change position

12. What type of glass is used in the interior rear-view mirror?

A. Flat glass
B. Convex glass
C. Opaque glass
D. Tinted glass only

13. What advantage does the flat interior mirror provide?

A. It does not distort the reflected image, helping judge speed and distance
B. It makes vehicles appear smaller
C. It eliminates all blind spots
D. It increases engine power

14. When should the interior rear-view mirror be adjusted?

A. When the vehicle is stationary
B. While overtaking
C. During a turn
D. During emergency braking

15. What should the driver be able to see in the interior rear-view mirror?

A. The whole rear window
B. Only the left rear tyre
C. Only the road centre
D. Only the sky

16. Exterior mirrors are generally:

A. Convex mirrors
B. Flat mirrors only
C. Opaque mirrors
D. Rectangular signs

17. What is a benefit of convex exterior mirrors?

A. They provide a wider field of vision
B. They make distances perfectly accurate
C. They remove the need for blind-spot checks
D. They show the dashboard

18. What is a limitation of convex mirrors?

A. Vehicles appear smaller and farther away than they actually are

SAFESTART DRIVING SCHOOL

© Safe Start Driving School

B. They show no vehicles
C. They are always flat
D. They cannot show the side of the vehicle

19. How should exterior mirrors be adjusted?

A. For the best rear view with minimal head movements
B. So that only the sky is visible
C. So that the driver's face is visible
D. So that the mirror is blocked

20. Where should the horizon appear in an exterior mirror?

A. In the middle of the mirror
B. At the extreme bottom
C. At the extreme top
D. Outside the mirror

21. Which mirror is closest to the kerb?

A. Nearside mirror
B. Offside mirror
C. Interior mirror
D. Rear window

22. Which mirror is closest to the inner lane marker?

A. Offside mirror
B. Nearside mirror
C. Interior mirror
D. Roof mirror

23. A driver checks mirrors but does not identify a cyclist in the blind spot. What should the driver do before changing direction?

A. Check the blind spot again
B. Change direction immediately
C. Accelerate
D. Hoot continuously

24. A learner asks why mirrors do not completely remove blind spots. The best answer is:

A. Blind spots vary by vehicle and driver and may still require a direct check
B. Mirrors are useless
C. Blind spots only occur at night
D. Convex mirrors show everything perfectly

25. A driver is about to overtake on a dual carriageway. Which observation practice is required?

A. Use mirrors and check the blind spot before changing direction
B. Look only ahead
C. Ignore following traffic
D. Check only the speedometer

26. A driver sees a fast-approaching vehicle behind in the mirror. What is the key observation principle?

A. Consider the hazard before slowing or manoeuvring
B. Ignore it because it is behind
C. Reverse immediately
D. Change lanes without checking

27. Why should a driver use all available mirrors?

© Safe Start Driving School

SAFE START DRIVING SCHOOL

A. To obtain a clearer view of the surroundings and identify potential hazards
B. To improve engine cooling
C. To reduce fuel consumption
D. To replace road signs

28. A driver is preparing to turn left and sees a cyclist near the vehicle. What should happen?

A. Use the mirrors and check the blind spot before changing direction
B. Turn immediately
C. Ignore the cyclist
D. Accelerate through the turn

29. Which statement best describes good observation?

A. Continuous awareness of what is ahead, behind and around the vehicle
B. Concentration only on the road directly ahead
C. Checking mirrors only after a collision
D. Watching only the dashboard

30. A driver cannot see clearly behind because the exterior mirror is badly adjusted. What should be done?

A. Adjust the mirror to obtain the best rear view
B. Continue and rely only on hearing
C. Fold it inward
D. Remove it

Chapter 7 total: 30 marks.

SAFESTART DRIVING SCHOOL

© Safe Start Driving School

CHAPTER 8 VEHICLE CONTROL

1. Before driving, a learner should first ensure that the vehicle is:

A. Safe to drive after appropriate preparation and inspection
B. Loaded beyond its capacity
C. In reverse gear
D. Without mirrors

2. Which is an important driving preparation step?

A. Adjust the driving seat
B. Remove the seat belt
C. Cover the mirrors
D. Leave doors unlatched

3. What should be checked about the doors before driving?

A. That they shut properly
B. That they remain open
C. That they are locked from outside only
D. That they are removed

4. Who should fasten safety belts before moving?

A. The driver and all passengers
B. Only the driver
C. Only passengers in the rear
D. Only children

5. A correct driving position should provide:

A. Adequate back support and comfortable access to the pedals
B. A stretched posture that cannot reach pedals
C. A position that blocks the mirrors
D. A position with no back support

6. How should the steering wheel normally be held according to the preparation section?

A. With both hands in a natural position
B. With one hand only at all times
C. With both hands off the wheel
D. With hands outside the window

7. Before starting to drive, the learner should check:

A. Dashboard instruments and their working condition
B. Only the radio
C. Only the boot
D. Only the paintwork

8. When starting a manual vehicle, the clutch pedal should be:

A. Fully depressed and held while starting as instructed
B. Released completely before starting
C. Removed
D. Pressed only after moving

9. Before starting the engine, the hand brake should be:

A. ON
B. OFF

© Safe Start Driving School

SAFESTART DRIVING SCHOOL

C. Broken
D. Removed

10. Before starting the engine, the gear should be in:

A. Neutral
B. 5th gear
C. Reverse
D. 4th gear

11. After starting, what should the learner check before moving?

A. Rear-view mirrors and the proper signal
B. Only the horn
C. Only the fuel cap
D. Only the temperature gauge

12. When moving off, the driver should select:

A. The appropriate gear
B. Any gear at random
C. Reverse only
D. Neutral only

13. What happens when the hand brake is moved to the OFF position during moving off?

A. It allows the vehicle to move after the other preparation steps are completed
B. It turns off the engine
C. It applies the brakes
D. It activates the hazard lights

14. To stop the vehicle safely, the driver should first:

A. Check rear-view mirrors to ensure it is safe to stop
B. Turn off the engine immediately
C. Select reverse
D. Release the steering wheel

15. Before stopping, the driver should communicate the intention to stop by:

A. Signalling properly
B. Hooting continuously
C. Switching off the headlights
D. Opening the door

16. When preparing to stop, the driver should remove the foot from the:

A. Accelerator
B. Brake
C. Steering wheel
D. Hand brake

17. As the manual vehicle comes to rest, the driver should depress the:

A. Clutch pedal
B. Accelerator
C. Wiper switch
D. Indicator switch

18. After stopping, the hand brake should be:

A. Set to the ON position

© Safe Start Driving School

SAFE START DRIVING SCHOOL

B. Left OFF
C. Removed
D. Used as the accelerator

19. According to the stopping procedure, the gear lever is placed in:

A. 1st position
B. 5th position
C. Reverse only
D. Neutral before the hand brake

20. What is the neutral position?

A. A position where no gear is selected
B. The highest gear
C. The reverse gear
D. The emergency gear

21. Which gear is used when moving off from a stationary position?

A. 1st gear
B. 3rd gear
C. 4th gear
D. 5th gear

22. The handbook associates 1st gear with approximately:

A. 0–30 km/h
B. 35–70 km/h
C. 60–110 km/h
D. 80–110 km/h

23. Which gear is described as useful in slow-moving traffic because it is more economical?

A. 2nd gear
B. 1st gear
C. 4th gear
D. 5th gear

24. Which gear range is given for 3rd gear?

A. 35–70 km/h
B. 0–30 km/h
C. 60–110 km/h
D. 80–110 km/h

25. Which gear can provide more power and speed and may be used when overtaking?

A. 4th gear
B. 1st gear
C. Neutral
D. Reverse

26. Which gear is associated with highways where speed limits are higher?

A. 5th gear
B. 1st gear
C. 2nd gear
D. Reverse

27. For steering to avoid airbag injury, the handbook gives which hand position?

SAFESTART DRIVING SCHOOL

© Safe Start Driving School

A. 9 and 3
B. 12 and 6
C. 1 and 11
D. 4 and 8

28. A J-turn involves:

A. A reversing vehicle turning 180 degrees and continuing forward
B. A vehicle turning 90 degrees
C. A vehicle parking parallel
D. A vehicle moving forward in a circle

29. Before making a U-turn, a driver should:

A. Check that there is no sign prohibiting it and ensure good visibility both ways
B. Make the turn without looking
C. Use the shoulder automatically
D. Hoot continuously

30. When reversing, how should the vehicle generally be controlled?

A. At slow speed to retain control of steering
B. At maximum speed
C. With the steering wheel released
D. In neutral only

Chapter 8 total: 30 marks.

SAFESTART DRIVING SCHOOL

© Safe Start Driving School

CHAPTER 9 COMMUNICATION ON THE ROAD

1. Why do road users use prescribed signs and signals?

A. To avoid confusion and misunderstanding on the road
B. To increase engine power
C. To replace vehicle maintenance
D. To allow unrestricted overtaking

2. What does MSM stand for?

A. Mirror, Signal and Manoeuvre
B. Move, Stop and Move
C. Mirror, Speed and Motor
D. Manage, Stop and Mirror

3. When should MSM be used?

A. Before moving off and before changes of direction or speed
B. Only when parking
C. Only at night
D. Only on motorways

4. Before a change of direction, the first part of MSM is:

A. Mirror
B. Manoeuvre
C. Signal
D. Brake

5. When checking mirrors in MSM, the driver should normally look first at:

A. The centre interior mirror
B. The road shoulder
C. The rear tyre
D. The dashboard

6. A driver is about to change lanes. What should happen before the manoeuvre?

A. Mirror checks and, where necessary, a blind-spot check
B. Immediate steering
C. Immediate acceleration
D. Turning off the indicators

7. Why should the blind spot be checked during MSM?

A. A potential hazard may be hidden from the mirrors
B. The blind spot shows fuel level
C. It improves engine temperature
D. It replaces signalling

8. A driver checks the mirrors and notices a hazard. What may the driver need to do?

A. Alter the intended route and reconsider the signal/manoeuvre
B. Continue exactly as planned
C. Ignore the hazard
D. Accelerate into it

9. Why should a signal be applied immediately after mirror checks?

A. Because a delay means the mirror sequence may need to be repeated
B. Because signals work only after braking

© Safe Start Driving School

SAFESTART DRIVING SCHOOL

C. Because signals replace observation
D. Because it prevents all overtaking

10. A signal given too late may:

A. Fail to give following vehicles enough time to react
B. Make the vehicle stop automatically
C. Increase visibility
D. Reduce fuel use

11. A signal given too early may:

A. Give the impression that the driver intends to turn sooner than actually intended
B. Guarantee right-of-way
C. Prevent all hazards
D. Increase engine power

12. When parking up, the handbook advises the driver not to signal:

A. Before a junction
B. After stopping
C. At the parking space
D. After checking mirrors

13. The manoeuvre part of MSM applies to situations such as:

A. Roundabouts, junctions, changing lanes and parking
B. Fuel filling only
C. Engine repairs only
D. Vehicle washing

14. A good driver should be prepared to alter MSM because:

A. Pedestrians, cyclists and other vehicles can be unpredictable
B. Signals are unnecessary
C. Mirrors are optional
D. All road users behave identically

15. A driver sees a cyclist near the intended turn. What may be necessary?

A. Repeat mirror and blind-spot checks before manoeuvring
B. Turn immediately
C. Ignore the cyclist
D. Accelerate

16. Which hand signal indicates an intention to turn left or move out to the left?

A. The left-turn hand signal shown in the handbook
B. The right-turn signal
C. The slow-down signal
D. The reverse signal

17. Which hand signal indicates an intention to slow down?

A. The slow-down hand signal shown in the handbook
B. The left-turn signal
C. The right-turn signal
D. The straight-ahead signal

18. Which light signal indicates an intention to reverse?

A. The reverse light signal

SAFESTART DRIVING SCHOOL

© Safe Start Driving School

B. The left-turn signal
C. The brake signal
D. The right-turn signal

19. A cyclist's hand signal for turning right communicates:

A. An intention to turn right
B. An intention to slow down
C. An intention to turn left
D. An intention to stop for fuel

20. A traffic police officer gives a stop signal. What should the driver do?

A. Stop as directed
B. Continue if the road looks clear
C. Hoot and proceed
D. Change lanes

21. A traffic marshal signals that pedestrians are ready to cross. Vehicles should:

A. Be prepared to stop
B. Accelerate through the crossing
C. Ignore the pedestrians
D. Park on the crossing

22. When all vehicles are instructed to stop by a traffic marshal, a driver should:

A. Stop
B. Proceed slowly
C. Reverse onto the pavement
D. Overtake

23. What does a green arrow allow?

A. Movement in the direction shown, if the way is clear
B. Movement in every direction
C. A compulsory U-turn
D. Parking

24. What does a red traffic light mean?

A. STOP
B. Proceed if no one is watching
C. Accelerate
D. Turn left only

25. What does red and amber together mean?

A. STOP and get ready
B. Proceed immediately
C. Park
D. Reverse

26. What does a green traffic light mean?

A. You may go on if the road is clear
B. You must stop
C. You must reverse
D. You must turn left

27. What does an amber traffic light mean according to the handbook?

SAFE START DRIVING SCHOOL

© Safe Start Driving School

A. STOP at the line
B. Accelerate regardless of conditions
C. Park
D. Reverse

28. If traffic lights are not working because of a power failure, the driver should first:

A. Stop at the intersection
B. Proceed at full speed
C. Ignore other traffic
D. Turn around immediately

29. During a traffic-signal blackout, when may the driver proceed?

A. When satisfied that other turning/approaching vehicles, bicycles and pedestrians have stopped
B. Immediately after arriving
C. Only after hooting three times
D. Only after switching off the engine

30. A driver plans to increase speed. Why should MSM still be considered?

A. A vehicle may be trying to overtake, so the driver should remain aware of surrounding traffic
B. MSM applies only to parking
C. Increasing speed has no road effect
D. Mirrors are unnecessary when accelerating

Chapter 9 total: 30 marks.

SAFESTART DRIVING SCHOOL

© Safe Start Driving School

Chapter 9: 30 marks.

CHAPTER 10: SPEED MANAGEMENT

1. What is a major cause of road accidents identified in the handbook?

A. Reckless driving and over-speeding
B. Driving with clean windows
C. Using indicators correctly
D. Maintaining safe distance

2. What should a driver consider when choosing a safe speed?

A. Only the vehicle's age
B. Road speed limits and current road conditions
C. Only the speed of the vehicle behind
D. The driver's preferred music

3. Why is driving at high speed dangerous?

A. It increases the time available to stop
B. It reduces the severity of every crash
C. It leaves less time to respond and can make crashes more severe
D. It guarantees better fuel economy

4. A driver approaches a bend on a wet road. What is the safest choice?

A. Accelerate to pass through quickly
B. Maintain high speed
C. Close the gap to the vehicle ahead
D. Reduce speed to suit the bend and conditions

5. Which group faces particular risk from vehicles travelling at high speed?

A. Pedestrians
B. Mechanics
C. Vehicle inspectors
D. Passengers in parked vehicles only

6. Poor speed management can make it harder to:

A. Read a parked vehicle's number plate
B. Stay in control when negotiating corners
C. Adjust the radio while parked
D. Open a window

7. At high speed, a driver has less time to respond to:

A. Only road signs
B. Only pedestrians
C. Changing road and weather conditions
D. Vehicle colour

8. What may happen to fuel consumption when speed is poorly managed?

A. It always falls
B. It becomes zero
C. It is unaffected
D. It may increase due to poor efficiency

9. What is the 4-second rule used to estimate?

A. A following distance behind the vehicle ahead

© Safe Start Driving School

SAFE START DRIVING SCHOOL

B. The time needed to change a tyre
C. The duration of a traffic light
D. The time to warm an engine

10. In adverse weather, the vehicle ahead passes a sign. What should you do to apply the 4-second rule?

A. Sound the horn four times
B. Count one thousand and one through one thousand and four
C. Brake immediately
D. Change lanes before counting

11. You reach the same landmark before finishing the four-second count. What does this indicate?

A. Your speed is too low
B. The road is closed
C. You are following too closely and should increase the gap
D. The vehicle ahead is too slow

12. Which statement best defines braking distance?

A. Distance travelled before the driver notices danger
B. Distance travelled while deciding what to do
C. Total distance from seeing a hazard to stopping
D. Distance travelled from applying the brakes until the vehicle stops

13. What is thinking distance?

A. Distance travelled between deciding to brake and actually braking
B. Distance travelled after the brakes have fully stopped the car
C. Distance between two road signs
D. Distance needed to reverse

14. Stopping distance is calculated by adding:

A. Speed and gear
B. Thinking distance and braking distance
C. Tyre pressure and vehicle weight
D. Reaction time and fuel use

15. Which condition increases braking distance?

A. A dry, clear road
B. New tyres and good brakes
C. Wet or poor road conditions
D. Driving at a lower speed

16. A vehicle is overloaded and has worn tyres. What should the driver expect?

A. A shorter stopping distance
B. No change in stopping distance
C. Better braking performance
D. A longer stopping distance

17. Thinking distance is affected by:

A. Speed, fatigue and distractions
B. Vehicle colour only
C. The number of passengers only
D. The radio station

18. Which braking systems are mentioned in the handbook?

A. Hydraulic, electric and air only
B. Disc brakes, drum brakes and handbrakes

© Safe Start Driving School

SAFE START DRIVING SCHOOL

C. Engine, clutch and gearbox
D. Front, middle and roof brakes

19. Why do front brakes play a particularly important role during braking?

A. They are used only when reversing
B. They control the steering wheel
C. Braking transfers vehicle weight forward
D. They are connected to the handbrake only

20. Which wheels are applied by the handbrake, according to the handbook?

A. All four wheels
B. The front wheels only
C. The steering wheels
D. The two rear wheels

21. What is freewheeling also known as?

A. Coasting
B. Progressive braking
C. Engine braking
D. Aquaplaning

22. A driver depresses the clutch and lets the vehicle roll downhill. What practice is this?

A. Emergency steering
B. Freewheeling
C. Space recovery
D. Controlled acceleration

23. Why is freewheeling risky?

A. It improves control in every situation
B. It reduces tyre wear to zero
C. It reduces vehicle control because the engine is not engaged
D. It guarantees fuel savings

24. Does freewheeling save petrol according to the handbook?

A. Yes, in every situation
B. Yes, whenever the car is moving
C. Only when going downhill
D. No; fuel use is similar to an idling engine

25. What is a safer alternative to freewheeling when stopping?

A. Progressive braking
B. Switching off the engine while moving
C. Keeping the gear in neutral
D. Applying the handbrake suddenly at speed

26. A driver is approaching a junction and wants to slow down while maintaining control. What should the driver avoid?

A. Checking mirrors
B. Coasting with the clutch depressed
C. Observing traffic
D. Using progressive braking

27. Which factor should influence speed besides the posted limit?

A. The driver's impatience
B. The vehicle's paint colour

© Safe Start Driving School

SAFE START DRIVING SCHOOL

C. Traffic and the surrounding environment
D. The number of dashboard buttons

28. Why should a driver avoid excessive speed near pedestrians?

A. Pedestrians always move predictably
B. It makes the horn louder
C. It improves visibility
D. High speed increases the risk and severity of harm to pedestrians

29. A driver cannot stop within the distance visible ahead at night. What is the key speed-management problem?

A. Driving too fast for the visible stopping distance
B. Using a low gear
C. Keeping a safe following gap
D. Driving with the windows closed

30. What is the overall purpose of sound speed management?

A. To reach every destination as quickly as possible
B. To maintain control and reduce crash risk
C. To avoid using the brakes
D. To keep pace with the fastest vehicle

SAFESTART DRIVING SCHOOL

© Safe Start Driving School

CHAPTER 11: SPACE MANAGEMENT

1. What does space management mean in driving?

A. Keeping the vehicle clean
B. Managing the space around the vehicle for safe movement
C. Driving only in the left lane
D. Maintaining the engine temperature

2. Which three actions help a driver manage space?

A. Hooting, accelerating and overtaking
B. Using hazard lights at all times
C. Controlling speed, lane position and communication
D. Driving close to the kerb

3. Which condition provides a broad, clear view with few obstructions?

A. Closed condition
B. Changing condition
C. Restricted condition
D. Open condition

4. A road is bordered by buildings and parked vehicles that block the driver's view. This is a:

A. Closed condition
B. Open condition
C. Clearway condition
D. Stationary condition

5. A road suddenly narrows and the weather reduces visibility. This is an example of:

A. Open conditions only
B. Changing conditions
C. A parking condition
D. A vehicle defect

6. What is the space envelope?

A. The space inside the passenger cabin
B. The distance to the nearest fuel station
C. The appropriate space maintained around the vehicle
D. The width of the steering wheel

7. Why is maintaining a safe following distance important?

A. It allows tailgating safely
B. It removes the need to observe
C. It guarantees that no vehicle will overtake
D. It provides room to respond to hazards and changing traffic

8. You are driving in a busy traffic flow. Which speed approach does the handbook recommend as part of space management?

A. Drive at the same speed as vehicles around you in traffic
B. Always drive faster than surrounding vehicles
C. Stop repeatedly without reason
D. Follow the vehicle ahead very closely

9. You notice insufficient space in front of your vehicle. What should you do first to alert nearby drivers that you intend to slow?

A. Flash high beams continuously
B. Signal your intention to slow down

© Safe Start Driving School

SAFE START DRIVING SCHOOL

C. Move suddenly into another lane
D. Sound the horn aggressively

10. When recovering space, how should you turn?

A. Sharply and suddenly
B. Without checking the surroundings
C. Slowly, to create more room for yourself and others
D. By reversing immediately

11. An oncoming large vehicle needs room to pass. What should you consider?

A. The oncoming vehicle's size and weight and allow room to pass
B. Force it to stop by moving to the centre
C. Reverse regardless of traffic behind
D. Accelerate towards it

12. Why does the handbook caution against reversing to make room for an oncoming vehicle?

A. It always damages the gearbox
B. It is only permitted at night
C. It makes the road wider
D. It can affect vehicles following behind

13. Before joining or crossing a lane, what must you ensure?

A. That the vehicle behind is hooting
B. That you have sufficient space to do so safely
C. That you are travelling at maximum speed
D. That you do not need to signal

14. What is the main purpose of positioning a vehicle to 'see and be seen'?

A. To occupy two lanes
B. To make overtaking impossible
C. To improve visibility and help other drivers see you
D. To avoid checking mirrors

15. A driver enters a narrow street with parked cars and limited sightlines. Which condition is present?

A. Open
B. Changing only
C. High-speed
D. Closed

16. A driver moves from a wide dry road to a narrow wet road. What should the driver recognize?

A. Conditions have changed and may require specific action
B. The original speed is always safe
C. Space management is no longer needed
D. Only the vehicle behind matters

17. Which choice best supports a safe space envelope?

A. Driving in another vehicle's blind spot
B. Maintaining suitable gaps around the vehicle
C. Following closely to prevent merging
D. Changing lanes without warning

18. Why should a driver control lane position?

A. To avoid looking ahead
B. To use less fuel in every case
C. To maintain suitable space and visibility

© Safe Start Driving School

SAFE START DRIVING SCHOOL

D. To prevent all other road users from passing

19. In heavy traffic, another vehicle cuts into the gap ahead. What is a sensible response?

A. Accelerate to close the gap immediately
B. Drive alongside it aggressively
C. Ignore the reduced space
D. Adjust speed to restore a safe following distance

20. A driver sees a queue forming ahead. How can space management help?

A. By anticipating the queue and adjusting speed early
B. By accelerating into the queue
C. By following the vehicle ahead more closely
D. By changing lanes without checking

21. Which is an example of a changing condition?

A. A permanently clear, open road
B. A change in traffic flow or visibility
C. A vehicle parked in a garage
D. A fixed steering-wheel position

22. What can restrict a driver's view in closed conditions?

A. Clear road markings only
B. An empty field
C. Trees, buildings and other vehicles
D. A clean windscreen

23. Why should a driver avoid using all available space simply to move forward?

A. It improves safety automatically
B. It prevents traffic delays
C. It guarantees right of way
D. A safe buffer is needed to respond to hazards

24. You need to move across a lane but cannot identify a safe gap. What is the best decision?

A. Wait until sufficient space is available
B. Force your way across
C. Accelerate and hope others stop
D. Rely only on the horn

25. What should a driver do when an oncoming vehicle is large and the road is narrow?

A. Move into its path
B. Allow adequate passing room while keeping control
C. Reverse without checking behind
D. Speed up to pass it first

26. How does communication support space management?

A. It replaces observation
B. It gives the driver priority in every situation
C. It helps other road users anticipate your actions
D. It removes the need for safe gaps

27. Which statement about open conditions is correct?

A. They mean the driver can ignore speed
B. They occur only on motorways
C. They always involve heavy traffic
D. They generally allow clearer views and easier adjustments

© Safe Start Driving School

SAFE START DRIVING SCHOOL

28. A driver is entering a lane from a side road. What space-related concern is most important?

A. Having enough room to join without forcing others to brake sharply
B. Joining at any speed
C. Keeping the vehicle halfway across lanes
D. Avoiding mirror checks

29. Why should drivers continually reassess surrounding space?

A. The space envelope never changes
B. Traffic, road layout and visibility can change
C. Only parked vehicles affect space
D. Space matters only when reversing

30. The safest space-management decision is one that:

A. Prioritizes the driver's progress above all
B. Depends on other drivers yielding
C. Maintains room, visibility and time to respond
D. Eliminates the need to signal

SAFESTART DRIVING SCHOOL

© Safe Start Driving School

CHAPTER 12: EMERGENCY MANOEUVRES

1. Why might a driver need to perform an emergency manoeuvre?

A. To park faster
B. To save fuel
C. To overtake for convenience
D. To avoid an accident or imminent danger

2. Emergency manoeuvres generally require:

A. Quick and efficient actions
B. Long periods of hesitation
C. Aggressive acceleration in every case
D. Ignoring surrounding traffic

3. If the brake pedal fails to respond, what should the driver try first according to the handbook?

A. Switch off the engine immediately
B. Pump the brake pedal
C. Release the steering wheel
D. Accelerate to restore pressure

4. If pumping the brake pedal does not work, what does the handbook advise?

A. Apply the handbrake suddenly at high speed
B. Continue driving normally
C. Apply the parking brake gently but firmly while holding the release button
D. Turn off all lights and continue

5. After total brake failure, you manage to stop safely. What should you do next?

A. Drive slowly to the nearest town
B. Test the brakes at high speed
C. Continue if the road looks clear
D. Do not drive again; call for mechanic assistance

6. A tyre suddenly bursts while you are driving. What is the first appropriate control response?

A. Keep a firm grip on the steering wheel
B. Slam on the brakes
C. Turn sharply towards the shoulder
D. Accelerate hard

7. During a tyre blowout, why should you avoid slamming on the brakes?

A. It improves tyre pressure
B. It may cause loss of control
C. It makes the vehicle stop instantly
D. It prevents hazard lights from working

8. After a blowout, when should you pull to the side of the road?

A. Immediately while steering sharply
B. Only after reaching your destination
C. Once the vehicle has slowed to a safe speed
D. While accelerating

9. Which lights should be activated after safely managing a tyre blowout?

A. Parking lights only
B. Interior lights
C. High beams continuously
D. Hazard lights

© Safe Start Driving School

SAFE START DRIVING SCHOOL

10. Your vehicle's wheel drops off the pavement. What should you do?

A. Hold the steering firmly and ease off the accelerator
B. Brake hard immediately
C. Pull sharply back onto the road at once
D. Accelerate to climb back

11. When a wheel leaves the pavement, heavy braking should be:

A. Applied continuously
B. Avoided while slowing and regaining control
C. Used with sharp steering
D. Replaced by switching off the engine

12. When should you steer back towards the pavement after a wheel leaves it?

A. Before slowing at all
B. Immediately with a sharp turn
C. When the vehicle is under control
D. Only after stopping in the traffic lane

13. Your headlights suddenly go off at night. What should you check immediately?

A. Tyre pressure
B. Fuel level
C. Passenger doors
D. The light switch

14. If headlights remain off, what should the driver do?

A. Keep left and stop safely off the road
B. Continue at normal speed
C. Drive in the centre of the road
D. Follow another car closely

15. Why is driving at night without functioning lights dangerous?

A. It improves night vision
B. It is dangerous and illegal, and limits visibility
C. It reduces stopping distance
D. It makes the vehicle easier to see

16. What is defensive driving?

A. Driving faster than surrounding traffic
B. Driving only on familiar roads
C. Safe, cautious driving with extra vigilance where danger may arise
D. Driving without using mirrors

17. Which is an important benefit of defensive driving?

A. It removes every road hazard
B. It allows drivers to ignore traffic rules
C. It guarantees no vehicle damage
D. It helps drivers prepare to avoid accidents

18. Defensive driving can protect:

A. The driver and passengers
B. Only the vehicle's paintwork
C. Only people travelling behind
D. Only the engine

SAFE START DRIVING SCHOOL

© Safe Start Driving School

19. Which situation calls for defensive driving techniques?

A. A parked vehicle in a private garage
B. Rain, fog or windy weather
C. A vehicle being washed
D. A quiet room

20. Which is a defensive driving technique mentioned in the handbook?

A. Driving while tired to reach home
B. Assuming others will always give way
C. Improving observation, anticipation and awareness to match speed
D. Following closely to monitor the vehicle ahead

21. A driver feels exhausted before a long trip. What is the safest action?

A. Drink alcohol to relax
B. Drive faster to finish early
C. Open the window and ignore fatigue
D. Rest and do not drive while tired

22. You approach a sudden hazard and need to avoid it. What should guide your response?

A. Quick, controlled action based on the danger and available space
B. A sudden move without observing
C. Closing your eyes briefly
D. Using the horn as the only response

23. Why should a driver seek help after stopping due to total brake failure?

A. To avoid reporting the fault
B. The vehicle should not be driven again until the problem is addressed
C. To obtain permission to speed
D. Because the handbrake replaces all repairs

24. A car has a blowout on a busy road. Which sequence best matches the handbook?

A. Brake hard, turn sharply, then accelerate
B. Stop instantly in the lane
C. Hold the wheel, avoid harsh braking, slow gradually, pull over safely and use hazards
D. Release the steering wheel and coast

25. What is the purpose of evasive manoeuvres?

A. To perform driving tricks
B. To bypass normal road rules
C. To improve fuel economy
D. To get out of dangerous situations

26. Which statement about J-turns and U-turns is supported in this chapter?

A. They are skills associated with evasive manoeuvre driving and are addressed elsewhere in the handbook
B. They should be attempted by every new driver in traffic
C. They replace braking in emergencies
D. They are required at every junction

27. A driver encounters a difficult wet, sloping surface. What approach is recommended?

A. Ignore the surface and maintain speed
B. Use defensive driving and adapt to the conditions
C. Brake sharply throughout
D. Follow the vehicle ahead closely

SAFE START DRIVING SCHOOL

© Safe Start Driving School

28. What should a driver do if a hazard requires changing the original plan?

A. Insist on the original manoeuvre
B. Accelerate without checking
C. Be prepared to alter the manoeuvre to avoid danger
D. Rely on other road users to stop

29. Why does defensive driving help reduce vehicle costs?

A. It eliminates fuel costs
B. It prevents routine servicing
C. It guarantees no breakdowns
D. It can limit wear and tear and unexpected damage

30. The central aim of emergency manoeuvre skills is to:

A. Respond efficiently to danger while maintaining control
B. Demonstrate speed
C. Avoid stopping under all circumstances
D. Give the driver priority over others

SAFESTART DRIVING SCHOOL

© Safe Start Driving School

CHAPTER 13: SKID CONTROL AND RECOVERY

1. What is a skid?

A. A planned turn at low speed
B. A wheel sliding out of control on a slippery surface
C. A normal gear change
D. A vehicle inspection

2. A skid occurs when the tyres lose:

A. Fuel
B. Visibility
C. Traction or grip
D. Engine oil

3. Which actions can cause a skid?

A. Parking on level ground
B. Checking mirrors
C. Using indicators
D. Braking, turning or accelerating in a way that causes loss of traction

4. Which is a cause of skids listed in the handbook?

A. Driving faster than road or traffic conditions allow
B. Driving with clean mirrors
C. Keeping a safe following distance
D. Using a suitable speed

5. Sudden, hard braking can:

A. Improve grip in every situation
B. Cause a skid
C. Prevent all wheel lock
D. Increase visibility

6. Turning too fast around a bend may result in:

A. Lower fuel use only
B. Better traction
C. A skid
D. Improved stopping distance

7. What is a front-wheel skid?

A. The rear of the vehicle swings out
B. The engine stops
C. The vehicle rolls backwards
D. The vehicle goes off its intended course due to loss of front-wheel grip

8. A front-wheel skid may be caused by:

A. Excessive speed entering a corner or sudden braking while avoiding a hazard
B. Driving slowly on a straight dry road
C. Using the correct tyre pressure
D. Parking with the handbrake on

9. What happens in a rear-wheel skid?

A. The front wheels become larger
B. The rear of the vehicle swings out of line
C. The steering wheel locks permanently
D. The vehicle automatically stops

© Safe Start Driving School

SAFE START DRIVING SCHOOL

10. A rear-wheel skid is often associated with:

A. A clean windscreen
B. Low radio volume
C. Excessive speed followed by sudden braking in a hazard situation
D. Correctly anticipating a bend

11. What is aquaplaning?

A. A normal way of braking in rain
B. A type of parking
C. A method of cleaning tyres
D. Tyres losing contact with the road and riding on a wedge of water

12. What can cause aquaplaning?

A. Driving too fast on a wet road when tyre tread cannot channel away enough water
B. Driving slowly on a dry road
C. Using indicators in rain
D. Keeping a safe gap

13. How can a driver reduce the risk of aquaplaning?

A. Accelerate through standing water
B. Reduce speed in wet conditions
C. Brake sharply on puddles
D. Drive with worn tyres

14. Which tyre factors help maintain road grip and reduce aquaplaning risk?

A. Tyre colour and brand
B. Wheel trim design
C. Correct tyre pressure and adequate tread depth
D. The age of the driver

15. If aquaplaning occurs, what should the driver do?

A. Apply the handbrake firmly
B. Turn sharply from side to side
C. Accelerate hard
D. Ease off the accelerator and brakes until tyres regain contact

16. During skid recovery, what should you do with your feet first?

A. Take them off the accelerator
B. Press the accelerator fully
C. Keep braking hard
D. Depress the clutch and switch off the engine

17. What does the handbook advise about the brake pedal during skid recovery?

A. Keep it fully depressed
B. Release it and reapply the brakes gently
C. Pump it as hard as possible
D. Use the handbrake instead

18. When recovering from a skid, how should you steer?

A. Away from the intended path at all times
B. Keep the wheel fixed regardless of direction
C. Turn quickly in the direction you want to go
D. Close your eyes and hold the wheel

SAFE START DRIVING SCHOOL

© Safe Start Driving School

19. As the vehicle turns back in the correct direction, you may need to:

A. Accelerate sharply
B. Apply the handbrake
C. Stop looking ahead
D. Steer in the opposite direction to remain on your intended path

20. Where should you continue looking during skid recovery?

A. Along your intended path of travel
B. At the dashboard only
C. At the tyres
D. At the vehicle behind

21. A driver brakes hard while entering a wet corner and loses steering response. What type of skid may be occurring?

A. Rear-wheel skid only
B. Front-wheel skid
C. Aquaplaning in every case
D. A parking manoeuvre

22. A vehicle's rear swings sideways after sudden braking. Which skid description fits best?

A. Front-wheel skid
B. Aquaplaning necessarily
C. Rear-wheel skid
D. Normal cornering

23. Why should drivers adjust speed before a bend?

A. To avoid using mirrors
B. To increase tyre wear
C. To make the turn sharper
D. Excessive entry speed can cause loss of grip and a skid

24. Which road surface is especially associated with aquaplaning?

A. A wet road with sufficient water for tyres to lose contact
B. A dry, clean road
C. A level parking bay
D. A gravel-free garage floor

25. A driver notices water across the road and is travelling quickly. What is the safest preventive action?

A. Accelerate to cross before the water moves
B. Reduce speed and avoid abrupt control inputs
C. Brake hard while turning
D. Follow the vehicle ahead closely

26. Which statement about skids is correct?

A. Only careless drivers ever skid
B. Skids occur only at high speed
C. Even careful drivers can experience skids
D. Skids happen only on ice

27. Which action is least appropriate during skid recovery?

A. Looking along the intended path
B. Making controlled steering corrections
C. Easing off the accelerator
D. Slam on the brakes and make abrupt steering movements

© Safe Start Driving School

SAFE START DRIVING SCHOOL

28. What does tyre tread help do on wet roads?

A. Channel water away and support grip
B. Increase vehicle weight
C. Replace the braking system
D. Make the road dry

29. A driver accelerates too quickly on a slippery surface and the wheels spin. What has likely been lost?

A. Fuel efficiency only
B. Traction
C. Visibility
D. Steering-wheel adjustment

30. The purpose of skid control and recovery techniques is to:

A. Encourage driving at higher speeds
B. Make skidding harmless
C. Help regain control and return to the intended path
D. Replace preventive maintenance

SAFESTART DRIVING SCHOOL

© Safe Start Driving School

CHAPTER 14: ADVERSE DRIVING CONDITIONS

1. What is the first step in dealing with adverse driving conditions?

A. Drive faster to leave the area
B. Use the horn continuously
C. Avoid checking the vehicle
D. Prepare through training and vehicle readiness

2. Which vehicle features should be in good condition before driving in adverse weather?

A. Tyre tread, brakes and windscreen wipers
B. Radio, seat covers and paint
C. Door handles only
D. Air freshener and floor mats

3. When driving at night on an unlit road, what should you do?

A. Maintain the highest possible speed
B. Slow down
C. Switch off all lights
D. Follow another vehicle closely

4. What does it mean to 'overdrive your headlights'?

A. Using high beams on an empty road
B. Cleaning the headlights
C. Driving so fast that stopping distance exceeds the distance illuminated and visible
D. Driving with the dashboard lights on

5. When meeting an oncoming vehicle with bright headlights at night, where should you look?

A. Directly into the bright lights
B. At the dashboard
C. At the passenger
D. Up and beyond, slightly to the left of the oncoming lights

6. According to the handbook, when should low beams be used near an oncoming vehicle?

A. Within 150 metres
B. Within 500 metres only
C. Only when parked
D. Only on highways

7. When following another vehicle at night, when should low beams be used according to the handbook?

A. Within 150 metres
B. Within 60 metres
C. Only when the road is wet
D. Only when overtaking

8. On a rural road, when approaching a curve or hilltop at night, what should you do with your headlights?

A. Use high beams regardless of oncoming traffic
B. Switch off headlights briefly
C. Switch to low beams so you can detect oncoming headlights and avoid dazzling drivers
D. Flash high beams continuously

9. Which is listed as an extreme driving condition?

A. A clean vehicle interior
B. A quiet parking area
C. A routine vehicle wash

© Safe Start Driving School

SAFE START DRIVING SCHOOL

D. Fog

10. In fog, how should you adjust your speed?

A. Slow down gradually to a speed suitable for visibility
B. Maintain normal speed
C. Accelerate to get through quickly
D. Brake sharply every few metres

11. Which headlight setting is recommended in fog?

A. High beams only
B. Low beams, with fog lights if fitted
C. Parking lights only
D. No lights in daylight

12. Why are high beams unsuitable in fog?

A. They use too little electricity
B. They make the tyres slippery
C. Their light reflects off moisture droplets and can worsen visibility
D. They automatically stop the engine

13. In fog, which action should generally be avoided?

A. Being patient
B. Reducing speed
C. Using appropriate lights
D. Overtaking and changing lanes

14. Visibility is decreasing rapidly in dense fog. What should you do?

A. Move off the road into a safe parking area and wait for the fog to lift
B. Stop in the middle of a traffic lane
C. Use high beams and continue at speed
D. Follow the taillights ahead closely

15. How does rain affect driving?

A. It always improves visibility
B. It makes the road slippery and reduces visibility
C. It shortens braking distance
D. It increases tyre grip

16. What should a driver check about windscreen wipers before rainy conditions?

A. Their colour
B. Whether they make noise only
C. That blades are in good condition and do not leave streaks
D. That they are removed

17. Why should a driver avoid puddles where possible?

A. They are always shallow
B. They improve engine cooling
C. They make steering easier
D. They may hide potholes, splash pedestrians, affect brakes or cause engine problems

18. Which driving inputs reduce the chance of skidding in rain?

A. Smooth steering, braking and acceleration
B. Sudden steering and harsh braking
C. Rapid acceleration through puddles
D. Frequent sharp lane changes

© Safe Start Driving School

SAFE START DRIVING SCHOOL

19. What should you do with the following distance in rain?

A. Reduce it to keep pace
B. Leave more space between your vehicle and the one ahead
C. Drive beside the vehicle ahead
D. Ignore it if wipers are working

20. When are wet roads described as especially dangerous for traction?

A. After several dry weeks
B. Only at midday
C. During the first 10 minutes of a heavy downpour
D. Only after the rain has stopped for a day

21. What can mud and dust on headlights do?

A. Improve illumination
B. Have no effect
C. Reduce the need for low beams
D. Reduce illumination significantly

22. During a long trip, what should you do if headlights become covered with mud or dust?

A. Stop periodically in a safe place and clean them
B. Continue without lights
C. Use the horn instead
D. Wipe them while driving

23. What is recommended when visibility is poor because windows are fogged?

A. Ignore the fogging
B. Use the defroster and, where appropriate, open a window slightly
C. Drive with the windscreen covered
D. Use high speed to clear the glass

24. Why should a driver adjust the seat correctly before driving in difficult conditions?

A. To reach the radio more easily
B. To reduce fuel consumption
C. To perform manoeuvres properly and reduce injury risk
D. To avoid wearing a seat belt

25. What kind of clothing is suitable for driving in adverse conditions?

A. Heavy clothing that restricts movement
B. Clothing that prevents use of pedals
C. Any clothing, even if movement is restricted
D. Comfortable clothing that allows freedom of movement

26. If you need to remove a coat or gloves while driving, what should you do?

A. Stop in a safe place first
B. Remove them while steering with your knees
C. Ask a passenger to steer
D. Pull them off while overtaking

27. When driving in fog, why is patience important?

A. It allows you to drive faster
B. Visibility is limited and risky manoeuvres should be avoided
C. It eliminates the need for lights
D. It guarantees the road is clear

SAFE START DRIVING SCHOOL

© Safe Start Driving School

28. A driver is stuck in mud with wheels spinning. What is a suitable approach described in the handbook?

A. Apply maximum power continuously
B. Turn the wheels sharply and accelerate
C. Use steady, moderate power and avoid wheel spin
D. Keep spinning until the tyres dig deeper

29. If traction is poor and a manual vehicle is stuck, which gear may help when moving off gently?

A. Fifth gear
B. Reverse only in every case
C. Neutral
D. Second gear

30. What is the general principle for driving in adverse conditions?

A. Adapt speed and actions to reduced visibility, traction and changing road conditions
B. Drive as usual and rely on luck
C. Follow the vehicle ahead closely
D. Make sudden inputs to maintain momentum

SAFESTART DRIVING SCHOOL

© Safe Start Driving School

CHAPTER 15: PREVENTIVE MAINTENANCE

1. What is the main purpose of preventive maintenance?

A. To make the vehicle look newer
B. To identify and address problems before they cause breakdowns or unsafe operation
C. To avoid all vehicle inspections
D. To increase engine noise

2. Which action is part of routine vehicle care?

A. Ignoring warning signs
B. Driving until a component fails
C. Checking key vehicle systems regularly
D. Replacing parts only after a crash

3. A driver notices a warning light on the dashboard. What is the sensible response?

A. Cover the light and continue
B. Accelerate to clear it
C. Disconnect the dashboard
D. Investigate the warning and seek appropriate attention

4. Why should tyre condition be checked regularly?

A. Tyres affect grip, braking and safe handling
B. Tyres have no effect on safety
C. Only the spare tyre matters
D. Tyre checks are needed only after a puncture

5. Which tyre condition can contribute to unsafe handling?

A. Correct inflation
B. Incorrect tyre pressure
C. Clean wheel rims
D. Matching hubcaps

6. What should a driver do if a tyre has visibly damaged or excessively worn tread?

A. Ignore it until the next annual service
B. Increase speed to warm it
C. Arrange replacement or repair as appropriate before relying on it
D. Deflate the other tyres

7. Why is checking engine oil important?

A. It changes the road speed limit
B. It replaces coolant
C. It cleans the windscreen
D. It helps protect engine components and detect low oil levels

8. What should be done if the engine oil level is below the required mark?

A. Top up with the correct oil as instructed and check for possible leaks
B. Ignore it if the engine starts
C. Add water to the oil
D. Drive at high speed to circulate it

9. What is the purpose of checking coolant?

A. To improve the radio signal
B. To help prevent engine overheating
C. To inflate the tyres
D. To clean the brakes

© Safe Start Driving School

SAFE START DRIVING SCHOOL

10. A temperature gauge indicates the engine is overheating. What should the driver do?

A. Continue at high speed
B. Open the radiator cap while hot
C. Stop safely and address the overheating rather than continuing to drive
D. Ignore the gauge

11. Why should a vehicle's brakes be inspected and maintained?

A. They are used only when parking
B. They improve fuel quality
C. They are unrelated to stopping
D. They are essential for slowing and stopping safely

12. A driver hears unusual squealing from the engine area. What is the best maintenance response?

A. Investigate the noise and seek repair if needed
B. Turn up the radio
C. Ignore it indefinitely
D. Remove the seat belt

13. What should be checked if the engine fails to start?

A. The vehicle's colour
B. Possible fuel or electrical faults and relevant connections
C. The passenger's footwear
D. The radio station

14. A vehicle's starter does not operate and the battery may be flat. Which action may be appropriate?

A. Overinflate the tyres
B. Pour coolant into the battery
C. Check the battery and connections; seek assistance or jump-start if suitable
D. Keep turning the key indefinitely

15. Why should lights and indicators be maintained?

A. They make the vehicle faster
B. They replace mirrors
C. They are only decorative
D. They help the driver see and communicate intentions to others

16. An indicator flashes irregularly. What possible issue does the handbook's troubleshooting table identify?

A. A possible bulb failure or unit fault
B. Low tyre tread only
C. A blocked exhaust
D. Incorrect seat adjustment

17. What should a driver do if a headlight bulb has failed?

A. Drive at night using the horn
B. Check and replace the bulb as appropriate
C. Cover the other headlight
D. Use hazard lights instead of headlights

18. Why should windscreen wipers be maintained?

A. They improve engine power
B. They reduce tyre wear
C. They help maintain a clear view in rain
D. They replace the braking system

© Safe Start Driving School

SAFE START DRIVING SCHOOL

19. What can happen if a fan belt is loose or broken?

A. The vehicle becomes more aerodynamic
B. The fuel tank expands
C. The steering wheel changes size
D. Engine-related problems such as overheating may occur

20. A vehicle is overheating and coolant has been lost. What does this suggest?

A. A cooling-system problem that needs attention
B. The tyres are overinflated
C. The radio fuse has blown
D. The seat belt is twisted

21. What should be done when a hose has a leak during a journey?

A. Ignore the leak and continue indefinitely
B. Treat any temporary measure as temporary and arrange proper repair
C. Seal it with paper and consider it permanently fixed
D. Increase engine load

22. Why is it useful to inspect a vehicle before and after a journey?

A. It guarantees no future maintenance
B. It replaces servicing
C. It helps identify faults and plan repairs
D. It is needed only for new vehicles

23. Which is a sensible response to repeated engine misfiring?

A. Drive faster to smooth the engine
B. Ignore it if the radio works
C. Remove the air filter without checking
D. Have the possible fuel or electrical fault investigated

24. A driver notices a fluid leak beneath a parked vehicle. What should happen?

A. Identify the leak and have the vehicle checked before it becomes a serious problem
B. Park over the leak each day
C. Wash it away without investigating
D. Assume all leaks are harmless

25. Why should a spare tyre be kept in serviceable condition?

A. It reduces the vehicle's weight
B. It can be used if a road tyre becomes unusable
C. It replaces regular tyre checks
D. It prevents engine overheating

26. Which maintenance habit helps prevent avoidable breakdowns?

A. Waiting for a major failure
B. Ignoring unusual sounds
C. Regularly checking vehicle systems and acting on faults
D. Using warning lights as decoration

27. What should a driver do if the engine will not run because the vehicle is out of fuel?

A. Keep cranking the starter indefinitely
B. Add engine oil to the tank
C. Increase tyre pressure
D. Refuel safely and investigate if the fuel gauge or system may be faulty

SAFE START DRIVING SCHOOL

© Safe Start Driving School

28. A vehicle's battery connections appear loose. What is the appropriate response?

A. Have the connections checked and secured safely
B. Ignore them until the battery is replaced
C. Pour petrol over the terminals
D. Drive with the bonnet open

29. What is the benefit of addressing small faults early?

A. It guarantees the vehicle never needs servicing
B. It can prevent faults from developing into larger safety or reliability problems
C. It removes the need for a valid licence
D. It makes inspections unnecessary

30. Which statement best describes preventive maintenance?

A. Repair only after a collision
B. Replace every component each week
C. Regular care and timely attention to faults to keep the vehicle safe and reliable
D. Use the vehicle until it stops

CHAPTER 18 EMERGENCY PROCEDURES

1. What is the first responsibility of a driver or witness at a crash scene?

A. Stop and offer assistance where possible
B. Leave immediately
C. Move every injured person
D. Wait for another driver to act

2. How far from the crash vehicle should reflector triangles be placed?

A. 50 metres ahead and 50 metres behind
B. 10 metres ahead only
C. 20 metres behind only
D. 100 metres on one side only

3. Which emergency services should be contacted after a serious road crash?

A. Police, ambulance and fire brigade
B. Only a mechanic
C. Only the vehicle owner
D. Only a traffic marshal

4. A crash has occurred and one person is uninjured. What should be done?

A. Move the uninjured person away from the vehicles to safety
B. Leave the person inside
C. Ask the person to drive away
D. Put the person in recovery position

5. When should an injured person in a vehicle be moved?

A. Only when there is immediate danger such as fire or explosion
B. Whenever the road is busy
C. Whenever the person asks
D. Immediately after every crash

6. A motorcyclist has crashed. When should the helmet be removed?

© Safe Start Driving School

SAFESTART DRIVING SCHOOL

A. Only when it is essential to do so
B. Immediately in every case
C. Only after police arrive
D. Never under any circumstances

7. Which is NOT one of the main aims of First Aid?

A. To make the casualty comfortable by giving food
B. To preserve life
C. To prevent the condition worsening
D. To promote recovery

8. Before approaching a crash casualty, what should a helper do first?

A. Assess and make the situation safe
B. Run directly to the casualty
C. Move all vehicles
D. Give the casualty water

9. If there is a danger of fire at a crash scene, what precaution is appropriate?

A. Prevent anyone from smoking or using matches or lighters
B. Start vehicle engines
C. Light a warning fire
D. Give everyone fuel

10. In Dr A.B.C., what does D represent?

A. Danger
B. Driving
C. Disability
D. Direction

11. In Dr A.B.C., what does R represent?

A. Response
B. Road
C. Recovery
D. Restraint

12. In Dr A.B.C., what does A represent?

A. Airway
B. Accident
C. Ambulance
D. Alertness

13. How should the airway be checked?

A. Open the mouth and check that the airway is not blocked
B. Give the casualty food
C. Sit the casualty upright immediately
D. Remove all clothing

14. How long should breathing be checked by listening and feeling near the casualty's mouth?

A. At least 10 seconds
B. One second
C. 30 seconds exactly
D. Two minutes

SAFESTART DRIVING SCHOOL

© Safe Start Driving School

15. If there is no breath or circulation, what should be done after emergency assistance is summoned, if the helper knows the technique?

A. Apply CPR
B. Give food
C. Make the casualty stand
D. Drive away

16. A casualty has a pulse but is still not breathing. What should be done?

A. Continue artificial respiration
B. Give medicine
C. Make the casualty drink water
D. Make the casualty walk

17. A casualty is breathing but does not answer questions. Which position is recommended?

A. Recovery position
B. Standing position
C. Driving position
D. Seated position only

18. What emergency number is normally given for summoning expert help?

A. 999
B. 111
C. 911
D. 000

19. Which information should be given to emergency services?

A. What happened, location, site dangers and number/severity of casualties
B. Only the driver's name
C. Only vehicle colour
D. Only the weather

20. Why should a helper avoid leaving a casualty alone when calling for help?

A. Another person can make the call while the helper remains with the casualty
B. The casualty must drive to hospital
C. The helper needs money
D. The casualty should be unattended

21. When may a seriously injured casualty need transport to a medical facility by others?

A. When help is not quickly available and advice has been obtained
B. Whenever the helper is in a hurry
C. After every minor injury
D. Only when the casualty asks

22. A casualty may have a spinal injury. What is the safest approach?

A. Do not move the casualty unless movement is essential for safety
B. Move the casualty repeatedly
C. Ask the casualty to walk
D. Place the casualty on a motorcycle

23. What is a suitable first response to heavy bleeding?

A. Apply firm pressure over the wound with a sterile dressing or clean padding
B. Give the casualty a drink

© Safe Start Driving School

SAFE START DRIVING SCHOOL

C. Wash the wound with fuel
D. Leave it unattended

24. If there are no broken bones, what may help reduce blood flow from a bleeding limb?

A. Raise the limb as high as possible
B. Lower the limb
C. Massage the wound
D. Make the casualty run

25. If a limb has a fracture or dislocation, what should be done?

A. Stabilize it and avoid unnecessary movement
B. Straighten it forcefully
C. Massage it
D. Exercise it

26. How should a burn be treated initially?

A. Cool the area with cold running water and cover with a clean dressing
B. Apply fuel
C. Rub the burn
D. Cover with dirty material

27. Which combination is characteristic of shock?

A. Cold, pale, damp skin and a fast or weak pulse
B. Warm dry skin and slow strong pulse only
C. Improved appetite
D. Normal breathing with increased energy

28. Which action helps a casualty suffering shock?

A. Lay the person down, keep them warm and calm, and loosen tight clothing
B. Give alcohol
C. Leave the person alone
D. Make the person walk

29. What should NOT be given to an accident casualty?

A. Food, drink or medicines
B. Clean water to moisten lips
C. A clean dressing
D. Reassurance

30. What is the purpose of the recovery position?

A. To help prevent choking on the tongue or vomit when an unconscious casualty is breathing
B. To increase vehicle speed
C. To stop all bleeding
D. To replace CPR

Chapter total: 30 marks.

CHAPTER 19 WORK PLANNING

1. What is the main purpose of work planning for a driver?

A. To prepare properly, manage the journey and arrive on time
B. To increase driving speed
C. To avoid planned stops

© Safe Start Driving School

SAFESTART DRIVING SCHOOL

D. To eliminate maintenance

2. Work planning allows maintenance work to be:

A. Scheduled in advance
B. Ignored until breakdown
C. Done only after an accident
D. Replaced by refuelling

3. Before a goods journey, what should the driver obtain?

A. The goods and appropriate documentation
B. Only a road map
C. Only a passenger list
D. Only a fuel receipt

4. Which information may be required about the sender of goods?

A. Name, address, phone number and directions
B. Only the sender's age
C. Only vehicle colour
D. Only driving licence

5. Why is the pick-up phone number useful?

A. It helps communication about collection
B. It determines tyre pressure
C. It replaces delivery time
D. It permits overloading

6. What appointment information should be confirmed for a goods trip?

A. Collection and delivery times
B. Only lunch time
C. Only vehicle colour
D. Only fuel station

7. A load contains fragile goods. What should the driver establish?

A. Requirements for securing the load
B. How to increase speed
C. How to avoid documentation
D. How to reduce stops

8. Goods are classified as hazardous. What should the driver consider?

A. Applicable legal requirements
B. Ignoring special requirements
C. Ordinary loading without checking
D. Removing documentation

9. If goods are transported outside the country of origin, what may be needed?

A. Other applicable legal requirements
B. No documentation
C. Only a spare tyre
D. Only a passenger seat

10. How does distance affect trip preparation?

A. Longer journeys require more preparation
B. Distance has no effect
C. Long journeys need fewer preparations
D. Only short journeys need planning

© Safe Start Driving School

SAFESTART DRIVING SCHOOL

11. For a very long journey, what additional arrangement may be necessary?

A. A co-driver who can take over
B. A second steering wheel
C. An extra horn
D. A passenger to control brakes

12. Why should peak traffic hours be considered?

A. They are likely to make the journey longer
B. They always shorten the journey
C. They eliminate traffic
D. They guarantee early arrival

13. How can travelling at night or early morning affect trip management?

A. Limited visibility can affect the journey
B. It always improves visibility
C. It eliminates fatigue
D. It removes planning needs

14. What is the best general approach to choosing travel time?

A. Plan ahead and choose a convenient travel time
B. Always travel at peak hours
C. Choose randomly
D. Always leave at midnight

15. Why should meal stops be planned?

A. To manage the journey and provide appropriate stopping places
B. To avoid all breaks
C. To increase speed
D. To eliminate route planning

16. If an unfamiliar route is being used, what can help identify suitable places to stop?

A. Maps
B. Only the horn
C. Only the fuel gauge
D. Only the mirror

17. What should a driver do before starting a journey if already tired?

A. Do not start until rested
B. Drive faster
C. Ignore the tiredness
D. Drink alcohol

18. A driver becomes tired during a trip. What is appropriate?

A. Stop at a convenient place, rest and get fresh air
B. Continue without stopping
C. Increase speed
D. Skip all future breaks

19. What should a driver do in adverse weather conditions?

A. Avoid driving in them where possible and take appropriate precautions if caught
B. Drive unchanged
C. Increase speed
D. Ignore visibility

20. Why should alternative routes be known before a journey?

© Safe Start Driving School

SAFE START DRIVING SCHOOL

A. They provide options if there are road restrictions
B. They eliminate directions
C. They guarantee no traffic
D. They replace vehicle inspection

21. Which resources can help obtain directions before starting?

A. Maps, GPS units and other drivers
B. Only the horn
C. Only the speedometer
D. Only the mirror

22. A driver discovers a road restriction on the planned route. What principle is useful?

A. Use a known alternative route
B. Continue regardless
C. Stop in the road
D. Use a prohibited section

23. What is the stated maximum total driving time for a public service or commercial vehicle in a 24-hour period?

A. Eight hours
B. Four hours
C. Twelve hours
D. Twenty-four hours

24. Why are legal driving-hour limits important?

A. They help reduce risks associated with excessive driving and fatigue
B. They encourage continuous driving
C. They eliminate traffic
D. They remove the need for rest

25. After completing a public service vehicle journey, what should the driver provide?

A. A summarized record of the trip
B. Only a verbal story
C. Only a fuel receipt
D. Nothing

26. Which document may be used to record work or journey details?

A. A work ticket or trip card
B. A parking receipt only
C. A shopping list
D. An advertisement

27. A driver has a long journey during peak traffic and limited visibility. Which plan is best?

A. Allow extra preparation, choose a suitable time and consider an alternative route
B. Ignore traffic
C. Leave without directions
D. Remove all stops

28. A goods driver has no information about securing fragile cargo. What should happen?

A. Obtain the load-securing requirements before departure
B. Load first and ask later
C. Drive slowly without securing
D. Ignore the condition

29. A delivery has a fixed appointment time. What should trip planning consider?

© Safe Start Driving School

SAFE START DRIVING SCHOOL

A. Collection and delivery times, distance and traffic conditions
B. Only vehicle colour
C. Only music
D. Only fuel gauge

30. Why is psychological preparation part of work planning?

A. It helps the driver prepare mentally as well as physically
B. It replaces sleep
C. It permits ignoring fatigue
D. It removes the need for directions

Chapter total: 30 marks.
